Saka water is a premium all-natural alkaline mineral water. It rises from a pure, remote and protected aquifer. It's not tap water or processed spring water. It is a simple and rare delicacy found only in a few places around the world.

Saka water has a natural alkaline pH balance of an outstanding 8.22. A pH below 7 indicates above-normal acidity, and a pH above 7 indicates water that is mostly alkaline.

Correct acid-alkaline balance is essential in establishing a foundation for optimum, vibrant health.

A pH imbalance can lead to a variety of health issues and problems.

The average western diet contains an abundance of acid-forming white sugars, white flours, overly processed meats and dairy products.

Even some bottled water brands are acidic - a fact not revealed on their labels or web sites.

Saka is bottled at Source under ultra-hygienic conditions and untouched from source to bottle, Saka is as pure as nature intended.

Saka has a unique balance of key minerals required by the body and because of this balance it has an incredible smooth taste.

Saka's unique collapsible bottles are blown at source for maximum hygiene.

No additives or harmful chemicals added.

Saka has an incredibly high absorption rate in the body.

Saka's purity of source, quality of water and natural mineral content is officially recognized by SGS Fresenius Institute adhering to the Strict European Parliament directives.
